PROJECT BRIEF

DAR is a smart housing platform designed to solve the main challenges people—especially students—face when searching for accommodation.

The project focuses on four key aspects:

- Financial: Helping users find housing options that fit their budget with transparent pricing.
- Social: Matching compatible roommates based on lifestyle and preferences to reduce conflicts.
- Safety: Providing verified listings and trusted landlords to protect users from scams.
- Convenience & Technology: Making the housing search faster, smarter, and more reliable.

digital payments.

DAR connects users with safe, affordable housing and suitable roommates, creating a more comfortable, secure, and modern living experience for everyone—especially students.

Creative & Smart Features:

- **360° Room & House View:** Users can explore rooms and apartments through immersive 360-degree views, allowing them to see the space clearly before visiting.
- **Smart Map Recommendations:** DAR recommends the nearest available accommodations on an interactive map, showing distance, transportation options, and nearby services.
- **Reviews & Ratings:** Users can view real reviews and ratings from previous tenants to make confident decisions.
- **Multiple Payment Methods:** Flexible payment options to suit different users, including monthly, shared, or digital payments.

DAR connects users with safe, affordable housing and suitable roommates, creating a more comfortable, secure, and modern living experience for everyone—especially students.
